

IBM Guardium Discover and Classify — Data Subject Access Request

IBM

You can't secure what you don't know exists

Discover your sensitive data

Understand
your data

Build an asset inventory

-  Discover structured & unstructured data
-  Classify how sensitive it is
-  Map to regulations and policies
-  Compile this to a central inventory

Explain data for compliance

- Who and what is accessing your data?
- What have they done, and what *can* they do?
- Who has privileged entitlements to sensitive data?
- What controls are in place on this data store?
- When did this change take place and who performed it?

I can tell you

IBM Security Guardium

Discover

Automate discovery and classification of on premises and cloud data and uncover critical vulnerabilities

Guardium
Discover and Classify

Encrypt

Safeguard privacy and confidentiality of data at rest, in motion, and in use with encryption and key management

Guardium
Data Encryption and
Key Lifecycle Manager

Monitor

Protect and harden on-prem and cloud data sources, including Azure Event Hubs, AWS Kinesis, Snowflake, SAP, etc.

Guardium
Data Protection and Insights and Vulnerability Assessment

Analyze

Generate reports and automate notification on long-term data activity within seconds, across the audit lifecycle

Respond

Identify and respond to compliance and data security risks, across environments and teams, from one place

IBM Guardium Discover and Classify

Uncover your sensitive data intelligence to speed up security, compliance, and privacy use cases

Identify unknown data at scale

A network-based approach to discover and map sensitive data, both at rest and in-motion

Automate insights, playbooks

Understand data subjects, data lineage, stakeholders, processes... then assess risk, assist breach investigations, speed compliance, and remove unnecessary PII

Classify sensitive data with AI

AI & ML classify both structured and unstructured data at the data element or repository level

Integrate with Guardium

Ready-to-use integration with Guardium Data Protection for stronger data classification, database monitoring, and vulnerability assessment

Data Aware Security

Enables clear protection by classifying data sources to prioritize data protection needs

Improve Efficiency

Significantly reduces false positives, which means analysts don't need to spend hours on them

Reduce Risk

Improve risk posture by combining data classification, activity monitoring and vulnerability management

IBM Security Discover and Classify

How does IBM Security Discover and Classify work?

IBM Security Discover and Classify

IBM ISDC for Privacy Producing Master Catalog

Update data subject record and references to found PII

- Files, transactions, database records, log files, etc.
- Data subject relationship(s) with company
